You will discover a lot of APK installers in developer forums. It's used to launch the installer of a program. There are exe and dll repair tools you may use to produce your computer run better. These files are extremely simple to use, but you first should set up your phone to install applications from third-party sources. Such files can be produced by creating a backup of current apps. APK files are intended for smartphones like android phones. The APK file works the same way as exe file works. But Apk files are only for Android platform, and Exe files are for Windows. Sometimes we want to use any

Windows program for Android, but the problem is Android only supports Apk file. So how to Run Exe file on Apk. The answer is you cannot. But you can convert Exe to Apk.

CONVERT EXE TO APK FILE

The process of converting EXE file to APK is very simple but first you have to download some tools and setup them on your device. You will need:

Software you want to convert in EXE

Change My Software (EXE to APK Converter)

Step 1 – Download EXE to APK converter tool

Step 2 – Once it is downloaded, double click on it to open. You have to select on “I Have a Portable Version”

Step 3 – Now select the EXE file from your computer that you want to convert into Apk.

Step 4 – Once loaded, find Convert option. Click on the Convert and wait. It will take few seconds to minutes depending on the size of the file

Step 5 – Done! Once your EXE file is converted to APK.

Step 6 – Now copy and paste that Apk file to your Android Phone and install it.
